

SPOT WELD CUTTERS

DF-15DX SPOT ANNIHILATOR. This kit will save you at least 30 minutes per panel. This tool will pay for itself in one month and make you money from then on. Our kit version gives you the option of storing the Annihilator and your bits in a form fitted carrying case. The Deluxe kit comes complete with the SPOT ANNIHILATOR, 1 in-line oiler, oil bottle, 1/ 10mm titanium and 2/ 8.0mm titanium coated drill bits. Purchased individually these pieces would cost \$110, but with the kit you pay only \$ 50 more.

DF-17 WELD BREAKER. Separate welded and bonded panels with ease. Two sharp edges ensure penetration and cutting action. Save time removing panels. German steel and German made this original tool cuts and cuts.

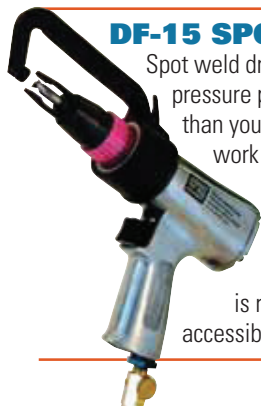

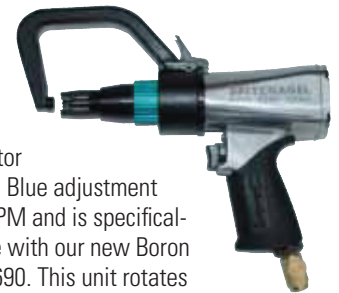

DF-15DXB BORON SPOT DRILL KIT. Boron Steel is only starting to become an issue with most shops. Porsche, Mercedes and Volvo specifically are using Boron hardened steel in various applications that require ultra high strength steel. This specialized steel can be four times harder than what we are used to. Ordinary drill bits dull immediately. The only solution is our 1000 RPM drill and the specially coated 3 fluted drill bits that come in this kit. This drill is depth adjustable and applies all the cutting pressure for you pneumatically. Kit includes 4 DF-1690 Boron bits, Large 3 inch C-clamp, Drill, cutting fluid and case.

DF-15B BORON SPOT DRILL.

This Spot Annihilator with it's distinctive Blue adjustment ring has a lower RPM and is specifically designed for use with our new Boron drill bits, the DF-1690. This unit rotates the specialized Boron bits at their ideal speed of 1000 rpm. This helps ensure a longer life for the bit and ultimate cutting action these tough spot welds.

DF-15 SPOT ANNIHILATOR. This is the ultimate Spot weld drill, you set the depth and the drill applies its own pressure pneumatically drilling out the spot weld faster than you ever thought possible. This tool does all the hard work for you. The pressure and the drill speed have been calibrated so the tool cuts into the spot welds at the optimal condition, adding to the life of the drill bits. Turn the red adjustment ring until you have the desired cutting depth. The C-clamp is rotates 360 and is removable. Making all areas accessible.

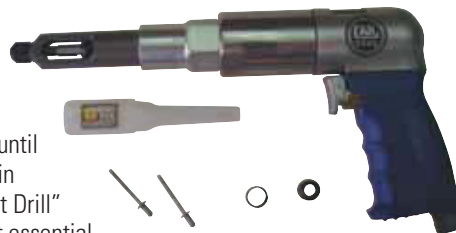

DF-SPD48L THREE INCH CLAMP.

Light enough for everyday use, this clamp allows the drill point on our Spot Annihilator to be dropped 3 inches from the edge of the panel. Spot weld drill not included.

DF-5125P SELF CENTERING RIVET DRILL.

Tired of trying to drill out pop rivets. It is practically impossible to stay on the center of the rivet, until now. Self-piercing, Blind, Dome, and Drive Pin rivets all need to be removed and our new "Rivet Drill" has come to the rescue. Simple in design, yet essential for anyone that works on aircraft, auto, bus or trucks. Removing panels of aluminum, stainless steel or steel riveted to aluminum is time consuming. Centering on the top of a pop rivet is very difficult and is often impossible. The "Rivet Drill" tool grabs around the rivet head ensuring proper centering and no slippage. The rivet head will be completely drilled, perfectly, saving time and damage. The tip of this drill can be changed for use with any size rivet head.

DF-SPD48M MEGA CLAMP.

The six inch specialty clamp can reach 6 inches into difficult situations, such as the trunk hinge area. Solid and heavy duty this clamp is the ultimate accessory for the ultimate drill.

Worker efficiency, worker safety and minimizing damage to surrounding material, this drill provides you with it all.
